WEIGHTS AND MEASURES**

CELEBRATING 125 YEARS OF PUBLIC SERVICE 1881 TO 2006

**COUNTY OF SAN BERNARDINO  
PUBLIC AND SUPPORT SERVICES GROUP**

JOHN G. GARDNER  
Agricultural Commissioner/Sealer  
ROBERTA Y. WILLHITE  
Assistant Agricultural Commissioner/Sealer

SECRETARY OF FOOD AND AGRICULTURE  
STATE OF CALIFORNIA

HONORABLE MEMBERS OF THE BOARD OF SUPERVISORS  
SAN BERNARDINO COUNTY

In accordance with the requirements of section 2279 of the California Food and Agricultural Code, this report provides the estimated production, acreage and gross value of the agricultural industry in San Bernardino County for the year 2005. Also included is a report on the activities for sustaining agriculture as specified in section 2272 of the aforementioned code.

The gross value of agricultural production in San Bernardino County for 2006 totaled \$435,787,200, a decrease of \$129,313,800 from the previous year. This decrease is primarily due to the reduction in the dairy industry in the Chino and Ontario areas. Milk production declined 11.2% and the average price dropped 24.2% when compared to 2005. The dairy herd has decreased for three consecutive years, and as the number of milk cows declined, the related production of replacement heifers, male calves and cull cows declined as well. These factors account for \$123.6 million of the decrease in value from 2005. Only nursery products and vegetable production maintained values similar to the previous year as development continues to displace the agricultural use of land. Acreage for high-value nursery production increased by 5.3%.

The value of agricultural production has not only declined in total amount but also in total economic impact when adjusted for inflation. Growers and ranchers see a continual decline in "real" dollar income as prices for agricultural goods fail to keep up with inflation. For example, the price for milk in 2006 was just slightly above the price received in 1978. In order to stay in business, growers and ranchers constantly look for new ways to increase production, reduce costs and gain a market advantage. Many small acreage growers have found direct marketing and unique varieties to be very profitable.

For the second year in a row, the most significant reduction in acreage for an agricultural commodity was rangeland. Rangeland forage was very poor due to drought conditions and many acres were not utilized in 2006 and so were removed from the total. Sales of land to conservation groups and mitigation measures to protect the desert tortoise population have also impacted the number of rangeland acres.

The exceptionally hot weather in July and August decreased milk and egg production and reduced yields for some vegetable crops. Nursery stock was also impacted as flats and containers were unable to be irrigated often enough to keep up with heat stress. There was some mortality losses for dairy cows and a reduction in the milk produced. The number of cows lost was estimated at approximately 300 over the normal mortality rates.

Information in this report was gathered from a variety of sources including marketing boards, packing houses, other governmental agencies and, most importantly, by individual contact with the producers of the County by my staff. Their efforts make this report as complete and detailed for local production as possible. The declining number of producers is noticeable by the reduction in acreage and the increases for most miscellaneous listings. Over 125 different commodities are included in this report and many are produced by just a few individuals. Contact with these producers is essential to the detail in this report.

Agricultural Commissioner/Sealer

MARK H. UFFER  
County Administrative Officer  
NORMAN A. KANOLD  
Assistant County Administrator  
PSSG Administration

**Board of Supervisors**

DENNIS HANSBERGER, . . . . . Third District  
JOSIE GONZALES . . . . . Fifth District  
GARY OVITT, Vice Chair . . . . . Fourth District  
BRAD MITZELFELT . . . . . First District

## SUMMARY AND NOTES

Drought conditions, a long period of excessive heat and continued urban encroachment into agricultural land in 2006 resulted in a reduction in the value of agricultural production when compared to 2005. However, a significant amount of the reduction was due to the price received for milk. The decline of the dairy industry over the last few years impacts calf production, replacement heifers and field crops, Nearly all of the field crop production is related to the dairy industry.

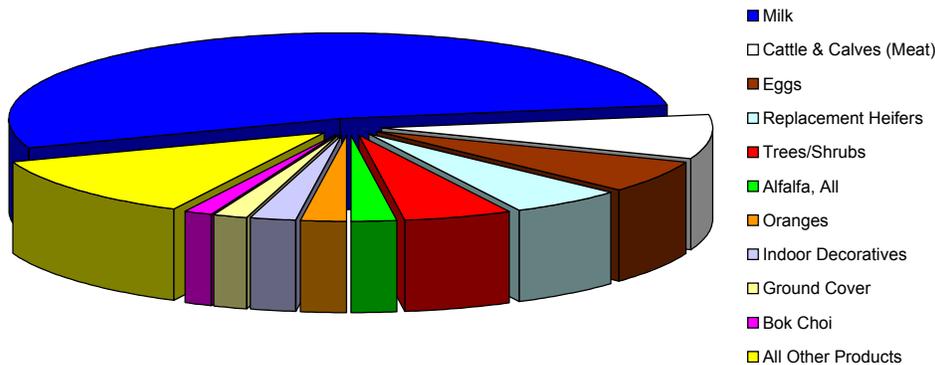

Acreage for fruits, nuts and nursery products reflects the actual amount of land involved. Acreage for vegetable and field crops usually is planted to multiple crops during the course of the year and therefore the total acres for these crop categories is larger than the actual acres of agricultural land.

Reported prices for commodities are F.O.B. from the shipping point or packing house or the equivalent price at the first delivery point. All data is for gross production, and prices are the average received. Commodities produced by fewer than three growers have been placed in the miscellaneous category for the commodity group unless permission has been given otherwise. Numbers have been rounded at the first level of compilation (District reports). Reports of small acreage, yield and value at the District level create the appearance of a greater degree of accuracy in the overall information as a result. Information contained in this report comes from a variety of sources including other governmental agencies, packing houses and growers. Without their cooperation, this report would not be possible.

Top Ten Products					
2006 Rank	Product	Value	% of Total	2005 Rank	
1	Milk	\$ 230,747,000	52.9%	1	
2	Cattle & Calves (Meat)	\$ 36,871,500	8.5%	2 R	
3	Eggs	\$ 26,590,100	6.1%	3 R	
4	Replacement Heifers	\$ 24,150,000	5.5%	4	
5	Trees/Shrubs	\$ 22,822,400	5.2%	5	
6	Alfalfa, All	\$ 10,219,600	2.3%	6	
7	Oranges	\$ 9,728,500	2.2%	7	
8	Indoor Decoratives	\$ 8,876,900	2.0%	8	
9	Ground Cover	\$ 7,142,400	1.6%	9 R	
10	Bok Choi	\$ 6,834,000	1.6%	10 R	
	All Other Products	\$ 51,804,800			
	Total Top Ten	\$ 383,982,400	88.1%		

Oranges includes both navel and valencia oranges. Ground cover was not included in 2005 and the 9 and 10 rankings have been corrected. Cattle & Calves now includes cull cows and the rankings for 2005 were revised, moving Eggs from 2 to 3.

### Definitions

**cwt.:** Hundredweight, 100 pounds.

**Greenchop:** Hay and other field crops harvested by cutting into small pieces and fed directly to animals.

**Cropland forage:** Fields where the crop stubble and residue is grazed on by animals, often sheep.

**Silage:** Greenchop placed into air-tight bags or enclosures and allowed to ferment, thus increasing the nutritional value.

**Packed:** Fruits and vegetables marketed as fresh and whole.

**Processed:** Fruit and vegetables either dried, juiced or otherwise changed from a fresh, whole item.

**Market Milk;** Milk sold for marketing as a fluid product generally for drinking.

**Manufacturing Milk:** Milk sold to make cheese, yogurt, powdered milk, etc.

**Started Pullets:** Young chickens produced to replace old egg-laying hens.

**Spent Hens:** Egg laying chickens who have reached the end of their productive careers.

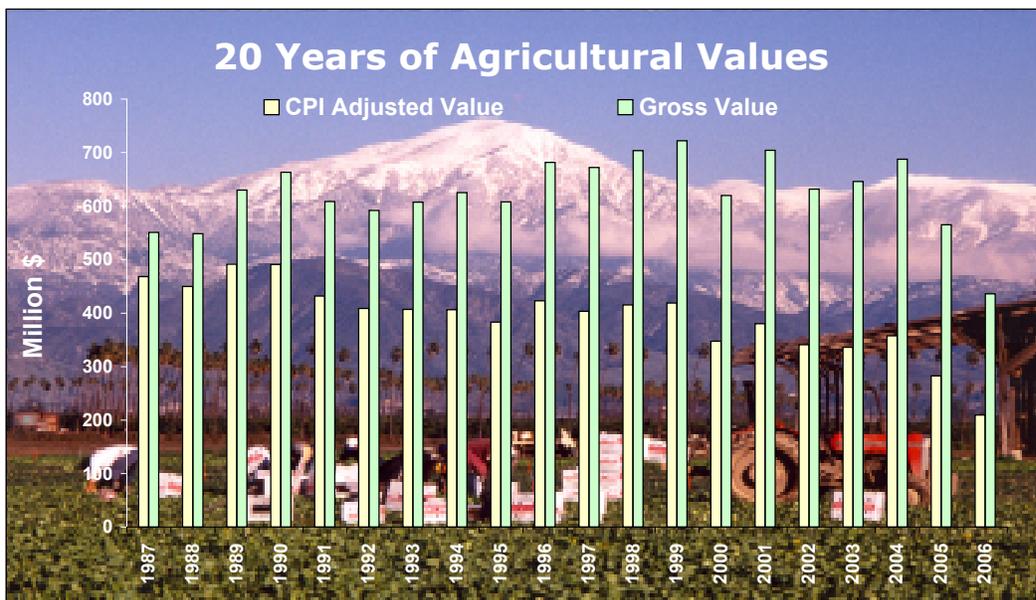

**Calves:** Young cows between 200 to 300 pounds, sold to ranchers to "feed" up to a size suitable for slaughter.

**Beef:** Cattle raised for meat and by products. Most of these are young male calves.

**Replacement Heifers:** Young female cows destined for milk production

**Cull Cows:** Milk cows who have reached the end of their productive careers and are sold for slaughter. Reported as "Dairy" in cattle and Calves.

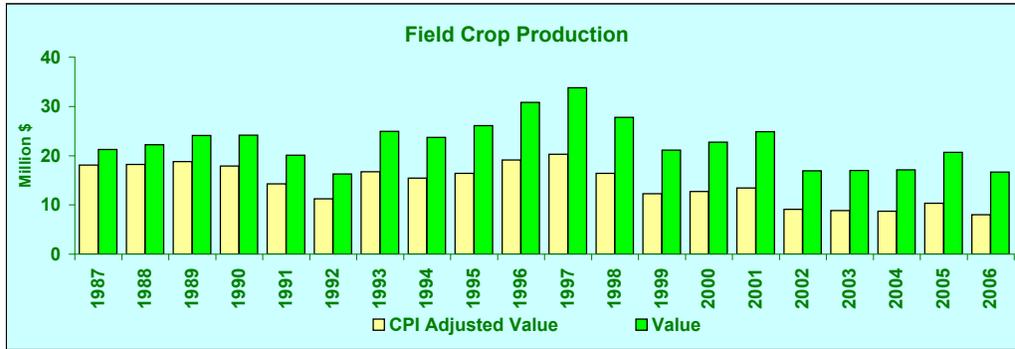

**The Cover:** The official insignia of the County of San Bernardino includes the scales of justice, the natural beauty of our mountains, emblems of industry and transportation, and symbols of agriculture including orchards and vineyards. It was designed by William Dedrick, Planning Department, in 1948.

Miscellaneous 2005 & 2006: Apricots , Bangkok Guavas, Blood Oranges (2006), Cherries, Chestnuts, Freestone Peaches, Jujubes, Kiwis, Lemons processed, Persimmons, Pears, and Raspberries (2005).

Fruit and Nut Comments: Yield and value of wine grapes is obtained through the Crush Report; harvested grape acreage is reported by growers. Table grapes and grape by-products are also reported by growers. Citrus acreage continues to decline due to residential and commercial development in the Redlands/Highland area. Pistachio production in the desert continues to have minimal production as most acreage is affected by poor water quality and soil conditions. Most fruit was not affected by the exceptional hot spell in July and August due to their harvest period.

Inventories are rough estimates derived from reported production and government permits.

**Livestock and Poultry**

Milk production continues to decline as dairies relocate out of the County. The resulting decline in production coupled with the lowest price for milk since 1978 led to a 32.7% decrease in the dollar value of milk produced. Calf production and replacement heifers related to the dairy herd also declined due to the smaller number of milk cows. Egg production declined because two ranches closed and from heat-related stress during July and August when the temperatures were considerably hotter than normal.

Central = The area east of Interstate 15 to Highway 30, south of the San Bernardino Mountains.

East End = The area east of Highway 30 and including all of the San Bernardino Mountains west of Highway 62.

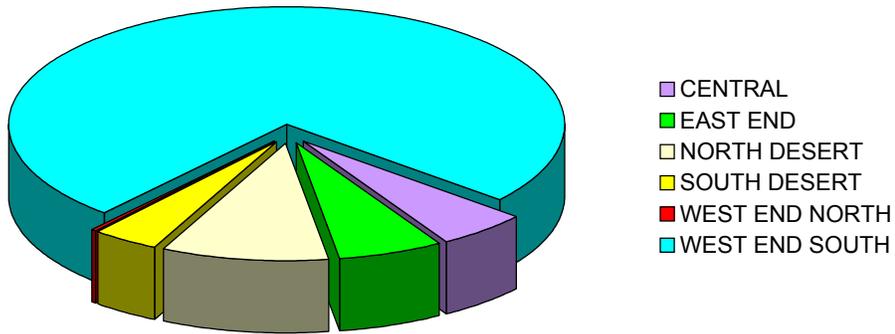

North Desert = The area north of Victorville including the area east along Highway 40 and National Trails Highway.

South Desert = The communities of Adelanto, Apple Valley, Victorville, Hesperia, Lucerne Valley, Yucca Valley, 29 Palms and the surrounding area.

West End North = The area north of Mission Boulevard and west of Highway 15.

West End South = The area south of Mission Boulevard including Chino Hills and parts of Chino and Ontario.

## \$ Production By Area

The West End South area has dominated the agricultural value production of the County since the late 1960s when dairies started moving in from Los Angeles County. Dairies are now leaving San Bernardino County due to urban development and the difference in value between the areas should diminish over the next few years. Urban displacement of agriculture has been a continual process in southern California since the 1940s. At one time, Los Angeles and Orange Counties had significant agricultural industries which today are almost totally gone.
